INFORMATION TECHNOLOGY (IT) IN BANKING AND FINANCE INDUSTRY (Code: INCM104)

INTRODUCTION

In this knowledge based economy it is no longer sufficient to be proficient in Information Technology specialization alone. A major factor determining the success of an individual is the ability to understand and specialize in an industry-specific domain. The objective of this short program is to give the participants an overview of the Banking and Financial industry while demystifying the process of enabling Banking systems, transactions and processes with the knowledge and use of Information Technology.

WHO SHOULD ATTEND

Undergraduates and professionals who intend understand the framework which enables managers and professionals to focus on addressing Banking systems, transactions and processes by enabling Information Technology.

LEARNING OUTCOMES

At the end of the program, the participants will be able to:

1. Understand and interpret Banking Systems and Processes
2. Understand how organisations use Information Technology to enhance Banking systems and processes
